

The Rise of Artificial Intelligence in Healthcare

Artificial intelligence (AI) is revolutionizing the healthcare sector to drive better outcomes. Some of the most common AI uses in medical and research facilities are:

Preventative healthcare

Medical imaging

Drug discovery

Patient pre-screening

Disease forecasting

At-home diagnosis

Let's see what the numbers have to say!

41% of patients found at-home diagnosis more comfortable.
(Deloitte)

With robot-assisted surgeries, the success rate jumped by 52%.
(Annals of Laparoscopic and Endoscopic Surgery)

In 2027, the global healthcare virtual assistant market is expected to reach \$2.8 billion.
(Annals of Laparoscopic and Endoscopic Surgery)

AI can help meet 20% of all clinical demands without having to visit clinics.
(Accenture)

63% of research subjects agreed that AI provides great value in pathology, radiology, and generic pharmacy.
