

CAREER TRENDS IN AI

The slow march of AI into everyday life and businesses has picked up pace, and the future looks like it's going to be written by AI. Not AI exactly, but professionals who'll be working in this field. Because of this career opportunities have been steadily increasing, and will soon reach a fever pitch. Let's take a look at how it's been so far.

SALARY TRENDS

Technologies which have massive demand but limited supply always command outsize salaries, and AI is no different.

14.3 L/ANNUM
median salary of AI professionals in India

60-70% SALARY HIKE
Job switch in AI domain

20-30% SALARY HIKE
for a job switch in other domains.

RISE OF AI JOB POSTINGS

While the demand for AIML professionals has been increasing, job seekers are lacking skills. The decrease in AI job searches suggests that there are more job openings than the skilled workforce needed to fill these postings. Much of tomorrow's workforce is still in training, or are thinking about upskilling.
