## Industrial and Enterprise Use Cases of SD-WAN

Software-defined networking and SD-WAN solutions are becoming an ever more popular choice for both industrial and commercial uses.

1

## SD-WAN in Retail

SD-WAN is allowing retail enterprises to get new stores up and **running much faster** than before, as they do not need multiple hardware pieces, engineers on site and an MPLS to get started.

2

## SD-WAN in Manufacturing

With SD-WAN solutions, manufacturers are able to isolate network segments based on process, business unit or department. No longer you have to provide access to your suppliers and jeopardize integrity of your own network.

**Network segmentation** is one of the biggest benefits for manufacturing industry.

3

## SD-WAN in Events

SD-WAN offers an intelligent WAN architecture **in order to prioritize** and leverage network traffic and resources at events so as to be able to manage both critical and low-priority traffic and offer services such as carrier-grade WiFi, remote viewer participation and much more.

4

## SD-WAN in Finance

Many SD-WAN solutions come with built-in security and protection measures such as temporary VPN connections and encryption as standard. **These two functions are a great** foundation to then build up the appropriate security measures and policy.

5

## SD-WAN in Healthcare

SD-WAN offer simplicity and single pane of glass management for number of challenges healthcare organization networks face such as **complex and disparate networks**, compliance, capacity, remote medicine, visitor WiFi access and network security.
