

A COMPLETE CLOUD UNIFIES BUSINESS

PROBLEMS

One company had 15 different "order-to-cash processes" due to acquisitions and rapid growth.

Many companies still email spreadsheets around during budget planning.

WHAT IF YOU COULD ELIMINATE EXTRA PROCESSES? ANSWER QUESTIONS LIKE THESE?

For Healthcare Providers/Payers: How can we better forecast effects on changing operations, improve margins by identifying sweet spots and increase quality to patients?

For Banks: How can we realize operational efficiencies and easily deliver the convergence of financial and regulatory reporting?

For Higher Education: How do we better forecast results of our student retention strategy and accurately project admissions?

For Professional Services : How can we manage our global talent pool and project delivery to improve margins and reduce travel expenses?

For Retailers: How can we conduct consumer driven planning, and efficiently fill orders while minimizing revenue loss?

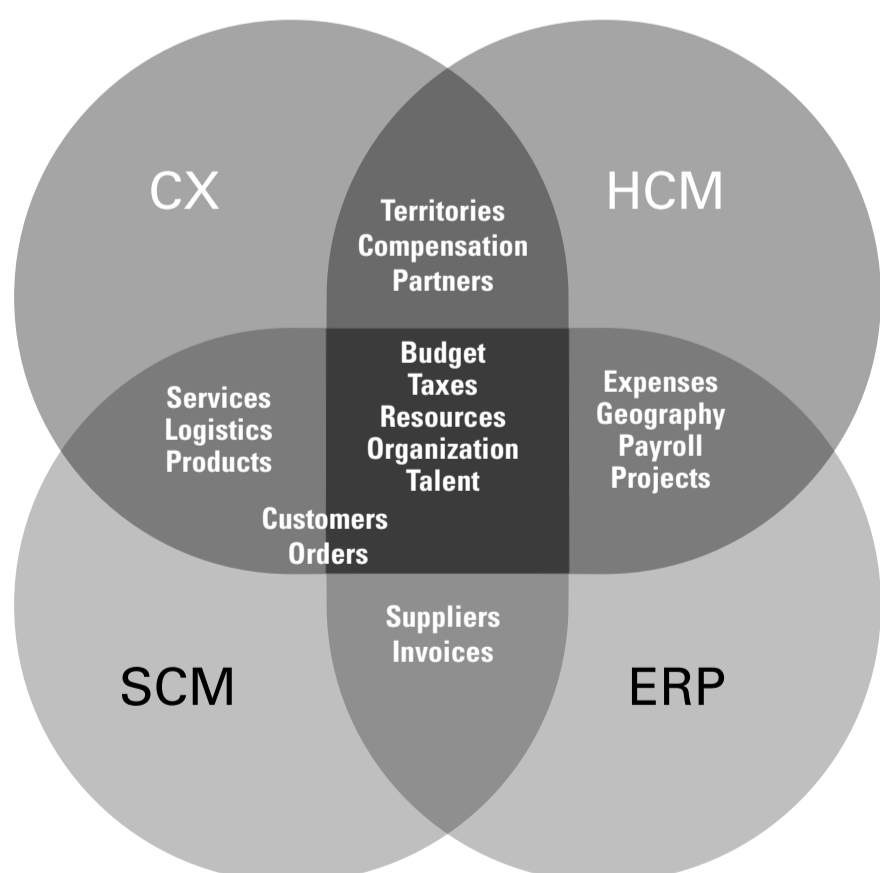

Research Shows, Less Steps with a Unified Cloud

There was an average of **32%** less steps to process key business flows which improved productivity **42%** for finance end users.¹

ORACLE'S COMPLETE UNIFIED CLOUD

The intersection and sharing of key data objects across the business.
Built-in modern best practices.
Reduce costs. Simplify your business.
Allow for faster innovation.

Stop wasting time on repetitive tasks.
Get a holistic view of your entire business.
