DEFINITIONS

NIST Definition

Cloud Computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort or service provider interaction.

ESSENTIAL CHARACTERISTICS:

On-demand self-service, broadband network access, resource pooling, rapid elasticity, measured service.

Wikipedia Definition

Cloud Computing refers to the provision of computational resources on demand via a digital network.

New York Times

Cloud Computing [is where] a company's computer functions are performed in an offsite network, allowing it to perform tasks on a large scale and handle a huge amount of Internet traffic. (CEO, Grid Dynamics)
