

# A CYBERCRIMINAL'S PATH TO YOUR DATA

## You Can't Patch People

There is no effective protection against Phishing and Malware. Increased IT security spending does not guarantee better protection.

**30%** of recipients click on phishing email  
12% of targets went on to open the malicious attachments or click the link.

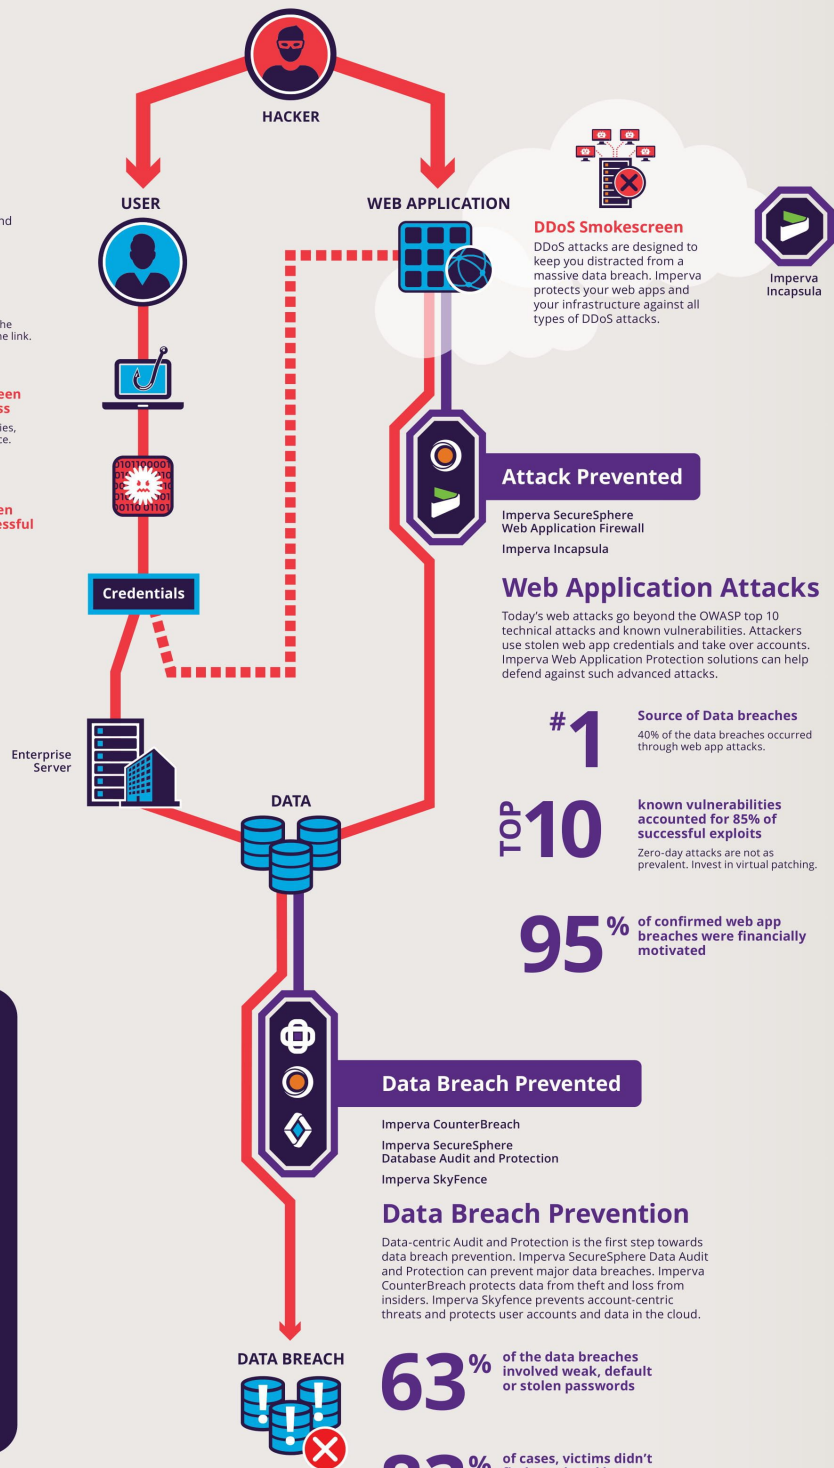

**99%** of malware hashes are seen for only 58 seconds or less  
Malware exploits OS vulnerabilities, most malware was seen only once.

**3** pronged attack (Phishing+Malware+Stolen credentials) widely successful  
Compromised endpoints/users result in stolen password.

Your biggest weakness is already on your payroll.

Users and Apps remain the weakest link in IT security. Hackers are financially motivated to exploit both human weakness and known application vulnerabilities to get to your data.
