JUNIPER NETWORKS AND MYRIAD360

Still looking for an affordable Wi-Fi 6 strategy to replace your increasingly unreliable network?

Don't worry, upgrading doesn't need to be complicated, costly, or disruptive to your existing network users. With Myriad360 and Juniper Networks, it's possible to implement a high-performing Wi-Fi 6 network that's easy to manage, scale over time, and doesn't require an expensive upfront investment.

Named 2022 market leader for wired/wireless access by Gartner®, **Juniper Mist** offers a complete and converged infrastructure solution that delivers blazing-fast Wi-Fi 6 performance. That's one reason Myriad360, Juniper's long-standing partner of the year, works with the most demanding technology-powered organizations in the world. Together, they provide turnkey solutions including–secure & mobile workforce, multi-cloud infrastructure, and cloud-integrated networks.

What Makes Mist AI Different?

Controller-Free and Open API
Mist can be deployed in any cloud or on-premises, and has 100% API-based programmability.

Personalized Location-Based Services
Personalized location-based services with virtual BLE and Wi-Fi technology

Automate Tedious IT & Customer Service Operations
Mist AI can reduce customer support tickets, defy infrastructure limitations, and drive strategic business decisions through location services data.

How Businesses Have Benefited from Mist

Companies of all sizes, from SMBs to large enterprises, leverage Mist services to simplify wireless operations and/or deliver value-adding location services, such as push advertising, wayfinding, visitor analytics, and asset tracking.

One of our favorite success stories, Wonderful Pistachios, had this to say about their experience:

"With the Mist solution and its AI foundation, we are seeing higher performance and troubleshooting of user issues is simplified and faster. The intuitive design and rich visibility of the management interface make it easier for our team to configure the system and to get insight into the user experience."

And another incredible organization, Dartmouth College, said:

"Our students are very demanding when it comes to the on-campus network. Juniper, driven by Mist AI, provides unique features that let us satisfy the most stringent wireless requirements, such as customizable Wi-Fi service levels, event correlation for rapid root cause analysis and a virtual network assistant that makes troubleshooting fast and easy for our team. In addition, Juniper enables us to transition our Wi-Fi operations to the cloud, delivering new levels of scalability and agility that we could not achieve with our previous controller-based WLAN architecture."

"Is It Time To Update My School's Infrastructure?"

Myriad360's Campus Architecture Assessments help schools understand their current infrastructure's intricacies and challenges.

At the end of the assessment, we'll give you detailed use cases, requirements, and recommendations for short-term and strategic roadmaps driven by your specific campus needs. We analyze the health of your firewalls, cloud database, network health, and disaster recovery readiness.
